DIGITAL LITERACY PROJECT REPORT

Name: Sumedha Bakshi

Reg No: 25BAI10037

Branch: B.Tech CSE (AI & ML)

Course Code: CSE0001

University: VIT Bhopal University

Introduction:

This project aims to develop essential digital literacy skills required in today's technology-driven world. As a Student Digital Ambassador, the objective was to understand and demonstrate the effective use of digital tools, online communication practices, and cybersecurity awareness. Through a series of five tasks, this project explores key aspects such as creating digital content, building an online portfolio, practicing coding, using collaboration tools, writing professional emails, and understanding cyber threats. Each task focuses on practical application and real-world relevance. This project not only enhances technical knowledge but also promotes responsible and ethical use of digital platforms.

Task 1: Digital Literacy Infographic:

For this task, I created a digital literacy awareness infographic using Canva, an online design tool known for its user-friendly interface. The infographic highlights key aspects such as the meaning of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I used icons, headings, and short bullet points to ensure clarity and visual appeal. The goal was to make the information easy to understand for students. While

designing the infographic, I found it interesting how visual elements can make content more engaging and impactful. However, arranging the content in a balanced and organized manner without overcrowding the design was slightly challenging.

Task 2: Digital Portfolio:

In this task, I created my digital portfolio using platforms such as GitHub, LinkedIn, and Kaggle. GitHub is used to manage and showcase coding projects, making it an essential tool for developers. LinkedIn is a professional networking platform where I added my educational details and will use it to connect with professionals and explore career opportunities. Kaggle is a platform for data science and machine learning, where I can practice with datasets and improve my analytical skills. Over the next four years, I plan to regularly update my GitHub with projects, build a strong professional network on LinkedIn, and participate in Kaggle competitions. These platforms will help me build a strong digital presence and prepare for internships and job opportunities.

Task 3: Platforms Exploration:

For this task, I explored coding and collaboration platforms such as Hacker-Rank and Google Forms. On Hacker-Rank, I completed a beginner-level problem called 'Solve Me First',

which helped me understand basic programming concepts and improve problem-solving skills. It provided a practical introduction to coding platforms. I also created a Google Form titled 'Digital Literacy Awareness Quiz' with five questions, including multiple-choice and short-answer types. The form helps collect responses and evaluate understanding. The responses are stored in Google Sheets, making analysis easy. These tools are useful for academic growth as they support coding practice, data collection, and collaborative learning.

Task 4: Email & Etiquette:

In this task, I learned the importance of professional communication by drafting two formal emails and creating a social media checklist. I understood that emails should include a clear subject line, proper greeting, structured body, and respectful closing. A situation where poor communication can cause problems is when a student sends an informal or unclear email to a professor. This may result in misunderstanding or no response. Such situations can be avoided by using polite language, clear structure, and professional tone. Effective communication is essential for academic and professional success.

Task 5: Cybercrime Awareness:

While researching cybercrime, I was surprised to learn how easily phishing attacks can deceive users through fake emails and websites. Even simple mistakes can lead to serious consequences like financial loss and data theft. I realized that awareness is the most important factor in preventing cybercrime. As a result, I will be more cautious while browsing online, avoid clicking unknown links, and never share sensitive information without verification. This project has helped me understand the importance of cybersecurity and will encourage me to adopt safer digital habits.

Conclusion:

This project provided valuable insights into digital literacy and its practical applications. It helped me understand how to use digital tools effectively, communicate professionally, and stay safe online. Each task contributed to building important skills that will be useful in my academic and professional journey. Overall, this project has made me more confident and responsible in using digital platforms.
